

New project launch!

Science and Faith in the Second City

Many people are of the view that science has 'killed' God, so making the Christian faith irrelevant. This event series will address many of the questions which emerge from this view and show, how science and the Christian faith are not only compatible but, that the Christian faith has important insights into contemporary scientific and cultural issues.

The Science and Faith project is administered by ChaplaincyPlus and the 'IS FAITH REASONABLE?' partnership. The aim is to enable Birmingham-based churches and Christian organisations to be part of a series of 6 public events bringing leading scientific speakers to the second city. Topic discussions will include climate change, mental health, genetic engineering, and human identity with speakers such as Professor John Lennox and Dr Sharon Dirckx.

Dates for your diary:

Tues 26 April – Can science explain everything?

~ Prof John Lennox (University of Oxford)

Tues 24 May – Why climate change matters.

~ Dr Ruth Valerio (Tearfund)

Wed 15 June – Who am I? Am I just my brain?

~ Dr Sharon Dirckx (Oxford Centre for Christian Apologetics)

Tues 20 September – My mental health and spirituality.

~ Rev Prof John Swinton (University of Aberdeen)

Wed 12 October – Making sense of our identity in the 21st century world.

~ Prof Glynn Harrison (University of Bristol)

Wed 16 November – Do scientists have the right to change our genes?

~ Prof. Keith Fox (University of Southampton)
